- c. adding the sample to the [continuous] flow of the supportive solution;
- reacting the biological material in the first solution or suspension with the compound in the sample to provide metabolites, or to assess permeability and bioavailability;
- e. washing the results of 1d [the reacting] between the biological material in the first solution and the compound in the sample through an ultrafiltration membrane to form a second solution; and
- f. analyzing the second solution to determine whether the compound in the sample has the predetermined characteristics, wherein the predetermined characteristics are selected from the group consisting of functioning as a substrate for an enzyme, showing desirable rates of enzymatic catalysis, showing desirable rates of cell permeability or transport, and showing enzymatic activation to reactive or toxic metabolites.

Claros

In claim 4, delete "capable of" and replace "can interact "with -- interacts--

In claim 5, delete "[and their metabolites]"

In claim 8, twice amended, replace "," with --and--

In claim 10, replace "whereas" with --wherein--

11. (Amended) A kit for analyzing [compounds] a compound in a sample, to determine whether the compound has predetermined characteristics that would make it suitable for a specific purpose, said purpose comprising drug development and screening for metabolic parameters, said kit comprising in separate containers, an ultrafiltration membrane, a first solution containing a biological material, a buffer, a test solution, and a set of standard solutions with predetermined characteristics, wherein the predetermined characteristics are selected from the group consisting of functioning as a substrate for an enzyme, showing desirable rates of enzymatic catalysis, showing desirable rates of cell permeability or transport, showing enzymatic activation to reactive or toxic metabolites.

In claim 12, insert -- membranes -- after "ultrafiltration"
